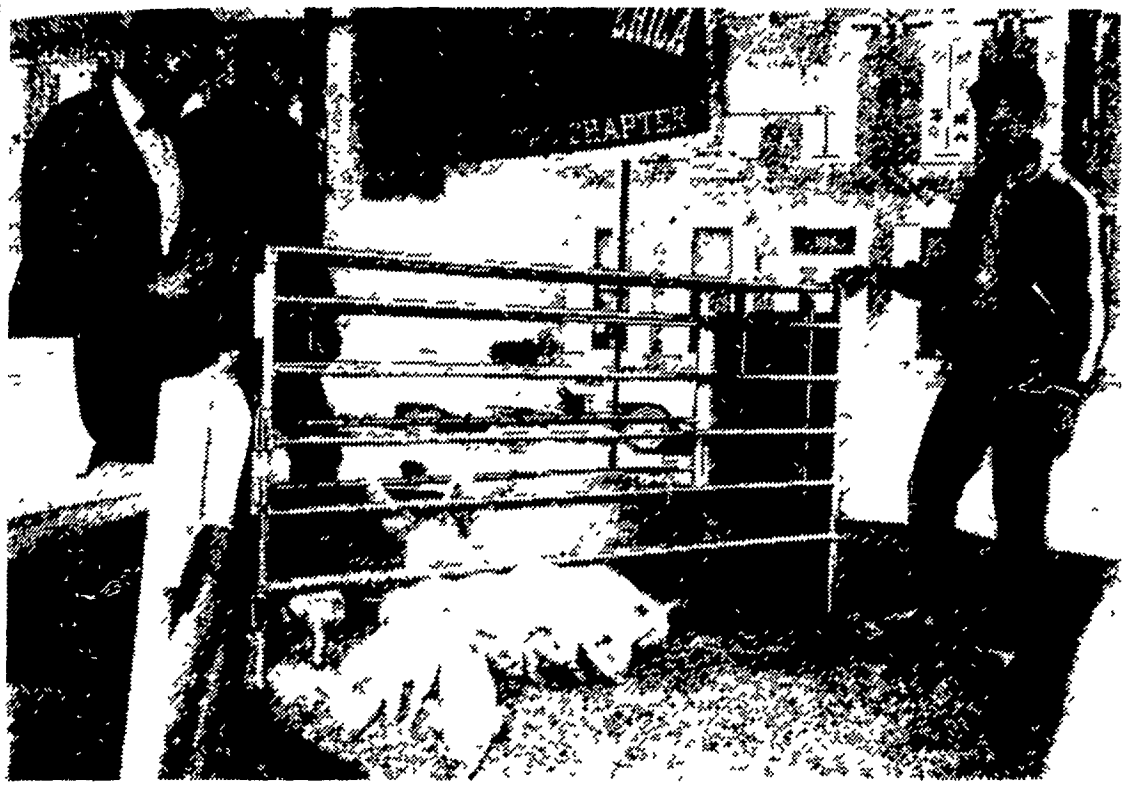
VOL. 9 NO. 12 | Lancaster Farming, Saturday, February 22, 1964 | $2 Per Year



NOT EXACTLY A PIG IN THE PARLOR, but a whole litter of them in a store window. To publicise National FFA week, the Future Farmers of Elizabethtown put a display of pigs and baby chicks in the front store window of Newcomer's Firestone Store on the main street of Elizabethtown. Here, Elvin Hess, left, teacher of vocational agriculture and advisor of the FFA chapter checks on the sow and litter with two committee members, Larry Givens, Bainbridge R1, and Donald Patches, Elizabethtown R1. L. F. Photo.

Drought Emergency Corn Received In Lancaster Co.

Fred G Seldomridge, chairman of the Lancaster County Agricultural Stablization and Conservation Committee, announced today the first shipment of Commodity Credit Corp corn being supplied to farmers in Lancaster County under the Emergency Livestock Feed Program arrived Thursday morning at Hiestand's Mill at Salunga

This is the first shipment of corn in this county that has been made under the recent emergency declaration made by the Secretary of Agriculture, Orville L Freeman Under the emergency designation, government owned corn is being made available to farmers in disaster counties of Penna at reduced prices to supplement feed shortages caused by severe drought conditions that existed during the past summer and early fall.

On hand to receive the first shipment which arrived this morning were Edison Osborne, State ASC Committee, Elmer L Huber, and John J Herr, County ASC Committee, Richard A Pennay, ASC Farmer Fieldman, and Dorothy Y. Neel, ASC County Office Manager

The car of corn originated at the CCC elevators in Gridley, Illinois, and was the first of numerous cars scheduled to arrive in this county in the near future

Farmers on hand to receive distribution of corn were J. Harold Musser, Mervin Neff, Paul Brubaker, Wilbur Erb, all of Mount Joy RD and Robert Nolt, Lancaster RD.

The County ASCS Office has a considerable backload of orders which will be filled as rapidly as cars are received at

Elizabethtown Future Farmers Pig In Store Window Draws Interest

Elizabethtown residents probably did a "double take" this week as they walked up the main street.

The unusual scene which greeted them was a large white sow and a litter of 10 pigs in a store window.

To draw the public's attention to National FFA week, the Future Farmers of America at the Elizabethtown High School put the display of pigs, and a batch of baby chicks in the front show window of Newcomer's Firestone store on Market Street.

John Ness, owner of the store, said Thursday "People were still bringing their children down to the store in pajamas at 10 O'clock at night on Monday." He said there had been a steady stream of adults and children looking at the exhibit all week The most often heard remarks are, "Aren't they cute?", "Are they for

SPABC Members Approve Merge With Western Co-op

Members of the Lancaster District of the Southeastern Penna Artificial Breeders Cooperative voted Thursday night to merge with Western Penna. Cooperative.

The vote of 126 to 28 follows the pattern of 11 other district meetings where the voting has been about 89 per cent in favor of the merger plans, according to David Yoder, General Manager

Members of the Clarion-based, Western Penna cooperative will vote at district meetings until sometime next week Yoder said the voting in district meetings there have been even more heavily in favor of the merger than in the local cooperative If the expected approval is given by the membership, the target date for the opening of business as a new cooperative is July 1.

If merger plans are approved, the Western cooperative facilities will be sold, and all barn and laboratory facilities will be located at Lancaster. The name of the cooperative will become Atlantic Breeders Cooperative

Yoder reported that 1963 marked the first year in the history of the cooperative that total volume fell below the previous year. "Income was

State SCS Officials Will Explain River Basin Study Here Next Week

County and municipal officials, planning commissions and conservationists of the county will get a first hand look at the U S Department of Agriculture's work in the Susquehanna River Basin, Wednesday evening February 26 at the Manor Shopping Center Auditorium, Lancaster.

State Conservationist Ivan McKeever, Chairman, U S Department of Agriculture Field Advisory Committee in the Basin study, will outline agriculture s role in developing the comprehensive plan for the Susquehanna River

The Department has been assigned major responsibilities by the U S Congress in studying the problems and needs in upstream watersheds Agriculture is now working with the U.S Army Corps of Engineers and others in developing the total plan for the Basin which is expected to be completed within the next 5 years.

Weekly Broiler Report

Hatcherymen in the Keystone State set 1,390,000 eggs for broiler production during the week, according to the Pennsylvania Crop Reporting Service.

The set was 2 percent above a week earlier and up 12 percent from a year ago. The 3-week total was up 10 percent from a year earlier. Placements totaled 888,000 chicks for commercial broiler production, 28 percent above a week ago and The 10-week total was 6 per-up 10 percent from a year ago. cent below a year earlier.

EASTERN PA. & N.J.

Movement disrupted on account of snowstorm, especially in Penna. section.

Buying interest for heavy type hens very restricted with too few sales to report prices. Offerings of heavy type irregular. Supplies of light type hens light despite recent declines of egg prices in terminal egg markets. Demand for the light type only fair. Some processors supplementing needs from New York State. Prices paid at farms for light type hens 8-8½¢.

FOGELSVILLE, PA. AUCTION REPORT, FEBRUARY 18

(Prices for dock weights, cents per lb. except where noted).

Hens, light type 7½-11½, M 8-9; Hens, heavy type 8½-21½, M 14-19; Pullets 17-31½, M 24-30; Roasters 7-30, M 22-27; Capons 27-33½; Ducks 22½-25; Drakes 25-38, M 35-38; Turkeys -toms 19-24, M 22-24; Turkeys - hens 20-37½, M 32½-37½; Rabbits 20-35, M 30-35 Guineas 30-48½; Pigeons (per pair) 62½-80, M 70-80; Jumbo Squab (per pair) 90; Total Coops Sold: 817.

● New Holland

(Continued from Page 2)

prices at the February 17 sale of horses, ponies and mules. Mules by the pair brought $250-490, and $110-170 singly. Pony mares were $40-80, and geldings $30-70. Riding horses brought $110-240, driving horses $110-225, and killer horses were 6-6½ cents a lb.

The 517 hogs at the Feb. 17 auction sold steady to 25 lower. Retail hogs to local butchers brought 17-18.25. Grades 1 to 3 went to packers at 16.10 to 16.75. Heavyweight hogs sold at 15.50 to 16. The 35 shoats brought $7-11 per head.

The 135 calves at the Feb. 17 auction sold steady as choice and prime vealers brought 36-41.50, good and low choice 34-36, standard 30-34, and cull and common 20-25.

Awards offered to Future Farmers of America members encourage the boys to work harder in their study of vocational agriculture.

● Delmarva Price Continues Down Trend

Live prices continued to decline nearly ½c. Demand was barely fair for light auction offerings. Ready to cook demand generally slow with several plants not operating today. Heavy snow in some market areas hampering deliveries. Delivered prices mostly unchanged with prices on high side of range premium quality. Prices paid and reported purchases at farm 24 hours ending 10:30 A.M. today broilers and fryers 14.0-15 0, 712,000 head 36% 14.0-14.4, 20% 14.5-14 8, 5% 15.0, 9% undetermined, 30% intra co. transfers.

The Delmarva broiler-feed ratio for the week ending February 14 was steady at 3.2. Broilers during the week averaged 15.88 and mash cost the grower $99.57 per ton.

From Where We Stand . . .

The Changing Family Farm

We have heard so much about large corporation type farms, contract farming, vertical integration, and the death of the small farm that we are sometimes prone to think that the family farm is a dead institution.

This just is not true.

It is true that farms and farming methods are undergoing a revolution. It is true that we may have to revise our concept of what makes a family farm. It is no longer possible to "go into farming" with 40 acres and a mule. Farming is becoming a business conducted on a much larger scale with infinitely more automatic equipment, but does the addition of acres, more livestock or equipment remove the enterprize from the ranks of a family farm.

In a recent survey by the U S Department of Agriculture, it was found that more and more of the sales of farm products are coming from farms with more than $40,000 gross annual business, but even though the farms, and the total volume of their business are getting larger, most of them continue to be family businesses in which the operators and family members are risk-taking managers doing most of the farm work

Technological advances have not materially changed the traditional pattern of family farms as the dominant unit of American agriculture.

True, it requires a great deal of capital to become established in agriculture today, but it never was easy to get into farming on a profitable scale. In retrospect, the good old days seem to have offered many advantages to the young man interested in a farming career, but we believe most of the advantages have been exaggerated in the minds of farmers as they look back to their youthful, vigorous days when no problem looked big and all opportunity looked grand.

We believe there is still opportunity in agriculture. We believe there is still room for the family farm, and we believe there will be for a long time yet to come

The best way for a young man to become established in farming is to inherit a good farm and a growing business, but wasn't this always so. While it requires a huge sum of money to put a farm on a paying basis, money is more plentiful than it was in grandfather's day. That is not to say it is any easier to borrow capital than it was a hundred years ago, but if you think it was easy for grandpa to borrow money in his youth, just ask him.

Grandpa knew, just as his grandchildren of today must know, farming is not an easy life. There is no royal road to success in farming. It takes money, and it takes work — now just as it did in the good old days.

There are very few ways to make easy money on the farm today. We doubt if there ever was any way to make easy money, except for a few isolated instances when all the breaks came one way. Competition is growing stornger every day, but competition never made anyone weak.

We do not believe that the family farm is dying. It is changing, as everything must change, and farmers must change with the times — their ideas, their methods, maybe even their philosophies of rural living — or the change will break them.

At least that's how it looks from where we stand.

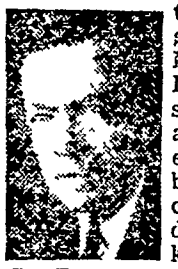
Unforgiven

Lesson for February 23, 1964

Background Scriptures: Luke 7 36 50.
Devotional Reading: Ephesians 1.3-14.

THREE PEOPLE met together that afternoon. There was a crowd in the room but all we know of the story is just what these three persons said and did. If artists had not painted it many times it would seem very strange to us. There the guests were at the long tables, only lying down, not sitting up straight as we do. No women were guests, but according to custom the outer doors were not kept locked, and



Dr. Foreman

apparently any one could wander in The guests were all barefooted; they had kicked off their sandals as a man here would remove his hat. Suddenly a woman, no respectable woman either, appeared behind the place where one of the guests reclined, and began to act in a way which even then seemed more than odd, wetting the guest's feet with tears, wiping them dry with her long hair, pouring on his feet ointment from a beautiful white flask. The woman's name we do not know, for Luke who tells the story was a gentleman; the host was named Simon and the guest was Jesus.

The mind of Simon

Why Simon had invited Jesus we do not know; perhaps from curiosity. He had not treated Jesus with even common courtesy, so we know Jesus was not the guest of honor by any means. Simon had an unpleasant mind. At that moment he was thinking sour thoughts about Jesus and the woman. For her he had no kind thoughts. All he knew about her was her reputation, and that was all he wanted to know He thought all those tears etcetera were just an act. He was ready to believe the worst about her, not anything good. For Jesus, Simon also had only contempt in his mind. The reason for this was that Jesus did not seem to despise the woman as Simon did. Either Jesus knew this woman for what she was, or he didn't. If he did, then he was wicked for letting her touch him. If he didn't, then he was a fool. That was the way Simor's mind operated: believe no good about any one.

The mind of a woman

The woman did not say a word from beginning to end. If asked what she was thinking, she might not have been able to make a sensible answer. But Simon could not see what Jesus saw, that this woman was passing through a crisis. Her tears spoke for her. Tears for the wasted years; tears for the sins she had done, for the life she had lived; tears perhaps because she could not turn the clock back and begin life where she had first left the right road—who knows how long ago? Tears for her weakness, for resolutions broken, for shame and for sorrow. She hated what she had been. But she had heard of Jesus. Just the word that he would be there, had brought her to seek him.

The mind of Jesus

Jesus knew what was in the mind of Simon, and what was in the mind of the woman. It is said that Jesus "answered" Simon, though Simon had not spoken a word, only "talking to himself." And he knew what was in the woman's mind, he knew the tears were not acting, they were real; he knew why the woman cried; and though she had not opened her mouth he knew what she really wanted. Did she know, herself? We may believe she did. She wanted to be at peace with God. Happiness, yes, but above all, peace. She knew, if only in a dim confused kind of way, that she had cut herself off from women—for women despise such a woman more than men do; she had cut herself off from clean people, cut herself off from respectable society. But what she wanted was not respectability, it was peace. And so Jesus—who knew not only the mind of men and women, but the mind of God—said the healing word: Your sins are forgiven . . . go in peace. Simon was a Pharisee, and pharisees led sheltered lives. His sins may have been far fewer than the woman's. But Jesus could not say to Simon, Your sins are forgiven. Simon had no tears for his sins, no repentance. And God does not send his peace to those who do not want it.

Members Vote For Merger With GLF At Eastern States Convention

SPRINGFIELD, MASS., February 19 — Consolidation of Eastern States Farmers' Exchange and Cooperative Grange League Federation Exchange was approved by members attending the Eastern States annual meeting here today

In their special meeting tomorrow in Syracuse, New York, GLF members will vote on the proposal to consolidate the two regional cooperatives.

In their meeting, Eastern States members heard the reports of the president, chairman of the executive committee, general manager, and treasurer pertaining to 1963 Eastern States operations and they elected officers and directors To their board of directors which now numbers 53, Eastern States elected or re-elected 18 directors

B Snavely Garber of Willow Street was re-elected to the board of directors Approximately one-third of the directors (currently 53) are elected each year to hold office for three years

Two Lancaster County farm youths were among nine honored Wednesday.

They were Carl E Ginder, Mount Joy R2, and Larry R. Weaver, New Holland R1.

Both county youths were selected on the basis of agricultural activities and community service.

Ginder, eighteen-year-old son of Mr and Mrs Ralph Ginder, is president of the Pennsylvania Future Farmers of America and operates a rented 30-acre farm

Weaver, son of Mr and Mrs Lester Weaver, farms in partnership with his father, feeding steers and raising tobacco.

Prune Trees

Most orchard men and landscapers plan to prune trees by the latter part of March because the dormant season is the best for this work. If shade trees are to be pruned or cut back the months of February and March are best suited for the job. Carl Bittner, extension pomologist, at The Pennsylvania State University, advises making clean cuts close to the main limb or trunk so that they will not hold water.

In vocational agriculture, considerable attention is given to training in farm mechanics, involving the selection, care, maintenance and operation of modern farm machinery.

Now Is The Time . . .

BY MAX SMITH

MAX SMITH

To Inoculate Legumes

Growers of alfalfa, red clover, or trefoil should inoculate the seeds before sowing; a few cents worth of legume inoculant will add dollars worth of nitrogen to the soil. The nitrogen-fixing bacteria in the inoculant make it possible for legumes to fix nitrogen from the air. Keep inoculated seed cool and away from sunshine and drying winds.

To Grow Cover Crops

Open land that is not to be farmed this season should be planted to a cover crop this spring. Acres of corn or barley that will go into the feed-grain, government program should not remain open to both wind and water erosion for the summer Many kinds of cover crops may be sowed this spring that will hold the soil and build up soil organic matter

To Read the Label on Seeds

Many farmers are seeding weed seeds on their farm by using untested, home-grown clover seed Seed analyses at the Bureau of Plant Industry at Harrisburg shows over 80% of the home-grown clover seed contains an excessive amount of buckhorn weed seeds Growers are urged to buy only tested seeds Farmers with seed for sale are urged to comply with the law and have their seed tested for weed content and germination.

To Prune Shade Trees

Early spring is a good time to prune most all kinds of shade trees (not evergreens). Injured, diseased, or poorly shaped limbs may be removed or trimmed, and the tree properly shaped for the purpose. Limbs over one inch in diameter should be treated with orange shellac or tree paint. Sharp shears and tools are necessary and cuts should be made parallel to the trunk or to the large limbs.

not quite as high as we had budgeted, but we saw the trend and began to trim expenses" he said

He reported the net saving of $55,390 27 had been returned to patrons as revolving fund certificates and cash No revolving fund certificates will be retired this year, he said, since an expenditure of nearly $50,000 was used in the switch from a fresh to frozen semen program However, he said, the conversion to the frozen semen program was made without borrowed capital

In other business, Abner Risser, Bainbridge, present vice president of the cooperative, was reelected to a three year term on the board of directors.

Five district delegates were elected to two year terms as follows Irvin G Graybille, Stevens R1, Charles L Groft, Kinzer, Rohrer M Hershey, Lititz R3, Harry G Kreider, Quarryville R1, and Noah Kreider, Jr , Manheim R3

The following four site reporting committeemen were elected J Cleon Huber, Washington Boro, Ayrshire, Melvin Stoltzfus, Ronks R1, Guernsey; J Eby Hershey, Gordonville R1, Holstein, Robert W Ulrich, Quarryville R1, Jersey.

local handling places which are: Nelson Weaver Lititz, R 2 S. H Hiestand & Co Salunga, and Cargill Inc. Marietta.

The office will continue to accept orders from eligible farmers until the closing date is announced

Under the Emergency Livestock Feed Program, farmers can purchase up to a 90-day feed allowance at one time. In Penna. corn will be the feed grain commodity available to farmers to ease feed shortages

The Secretary of Agriculture in approving this program, assured eligible farmers that feed grain will continue to be made available until the emergency is ended. This means that corn for the preservation of foundation herds is available for about $1.07 per bushel and corn for other eligible livestock at about $1.42 per bushel.

Farmres lackking funds to pay for such corn and unable to obtain credit through normal channels may borrow funds from Farmers Home Administration under an emergency loan program at low interest rates

Local Dealers To Tour Plant

Five, International Harvester Company dealers from Lancaster County, have returned from a three-day factory sales tour and meeting held at IH farm equipment plants in East Moline and Rock Island, Ill

CHECKING TEST WEIGHT on the first carload of Commodity Credit Corporation corn to reach the county under the drought emergency program are county and state ASCS members, farmers and feed mill representatives. Standing, left to right are John Herr, County ASCS member; Dorothy Neel, County ASCS office manager; Richard Pennay, farmer fieldman; Elmer Huber, County ASCS member; Edison W Osborne, State ASCS member, and John Melhorn, representing Hiestand's mill Kneeling, left to right are Wilbur Erb, Mount Joy R1 farmer, and Marlin McCorkle, representing Hiestand's mill, Salunga. L F. Photo.

Paul Cope and Ivan Metzler, New Providence, Ira Kauffman, Mountville, C B Hoober, Intercourse, and John Boose, Gap, were among 200 dealers and company personnel from the Harrisburg District who participated in the sales promotion February 12, 13 and 14

During the program, which began Jan. 19 and runs through Mar 14, more than 3,200 dealers from across the United States will tour Farmall Works in Rock Island, home of the Farmall tractor, and East Molin Works, where a complete line of harvesting equipment is manufactured.

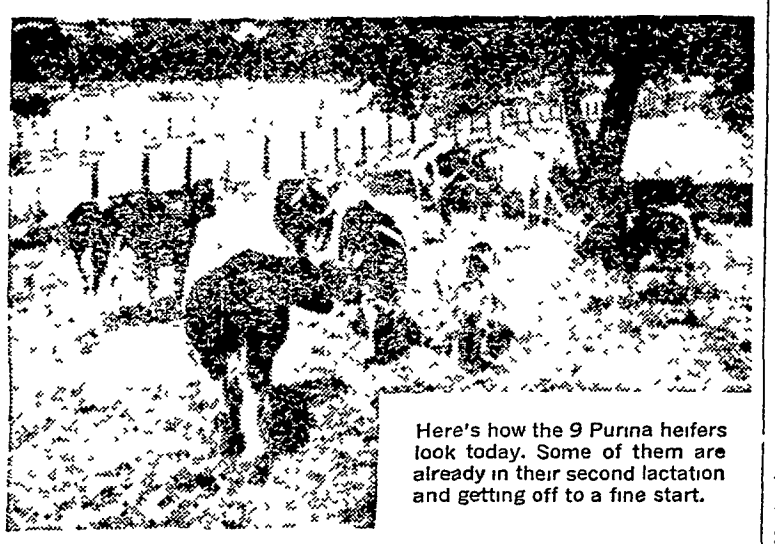
Checkerboard News®



Here's how the 9 Purina heifers look today. Some of them are already in their second lactation and getting off to a fine start.

9 Purina Dairy Research Center
Heifers that freshened at 22 months

AVERAGED 10,808 LBS. MILK IN THEIR FIRST LACTATION

Here's proof that early freshening pays off! These heifers averaged freshening at only 22 months instead of the normal average of about 31 months . . . nearly a full lactation early! So each of them produced nearly 10,808 lbs. of "extra" milk in their first 305-day lactation, compared to heifers freshening at 31 months.

No. P 10's first calf was born dead. She started slowly, pulling down the average of the group. She produced only 6,697 lbs. of milk. On May 16, 1963, No. P 10 had a normal calving and she's now off to a much better start.

Projected mature production of these heifers (based on standard U.S.D.A. factors) figures 14,499 lbs. One, P 11, has an estimated mature production of 19,062 lbs. of milk!

Years of research at the Purina Dairy Research Center, Gray Summit, Mo., has built feeding and management programs to help you grow animals fast for early breeding and freshening . . . for long, profitable milking lives.

Ask us to tell you more about proved Purina Dairy Feeding Programs. Pay us a visit . . . soon!

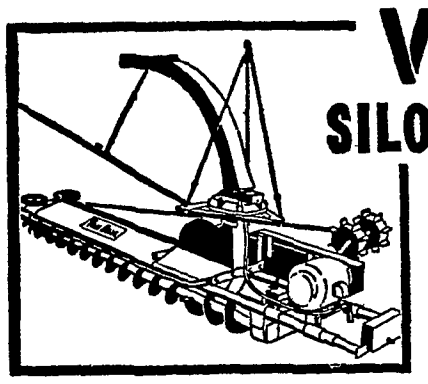
Complete automatic feeding for DAIRY COWS and CATTLE!

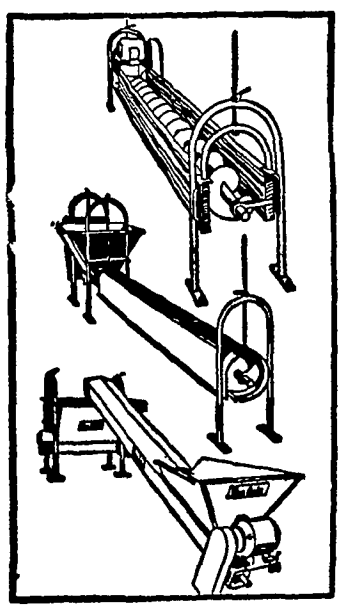


VanDale SILO UNLOADERS

Double augers deliver more silage per minute even when silage is deeply frozen . . . and at a lower operating cost. Patented V-paddle impellers *throw* . . . not blow . . . silage down chute. Adjustable drive hubs give positive traction in all types of silage.

Three-point suspension keeps unloader level at all times.

Plus a complete line of bunk feeders to meet your exact needs



Straight-out Auger Feeder

With VanDale units you can custom build the bunk feeding set-up to fit your needs. Drive section includes hopper, drive assembly and 10', high capacity 9" auger. Additional auger sections are in 10' units and are easily coupled.

Feed-R-Flo Bunk Feeder

The new, all-metal complete feeder. High capacity 9" auger rotates within tube. Gives all-weather protection, even feed distribution, and lower operating cost.

Conveyor Trough

An important link in automatic feeding. Positioned below silo chute, the VanDale conveyor trough carries the silage to the bunk feeder. Primary section includes hopper, drive assembly, and 10', 9" auger. Additional 10' auger sections may be added.

For the Farm Wife and Family

Budget Food For Good Nutrition

By Mrs. Richard C. Spence

SPENCE

Family food planning and buying is a challenging job To shop wisely in today's supermarket takes knowledge, good judgment, and a keen sense of food values in relation to food costs

First you must decide how much of your budget will be spent on food Then you must plan that allotment wisely so that you will be giving your family the foods they like along with their nutritional needs

A homemaker who is a skillful cook and has time will prepare many foods from basic ingredients, and be able to serve attractive, nourishing, low-cost meals from the less expensive foods A homemaker who is employed, is in poor health, or has numerous activities outside the home may prefer to buy processed and convenience foods to save time and energy

Some so-called convenience foods, such as heat-and-serve meals, and partly prepared foods, such as mixes and brown and-serve items, have extra services built into them and may cost more than the same foods prepared at home from basic ingredients. Other convenience foods may cost no more or even less than similar products made at home.

Although food is usually the largest single expense in a family budget, you can generally reduce the amount you spend for food by —

—Checking weekly specials in foodstore advertisements

—Preparing a grocery list before you shop

—Comparing costs and buying food in the form — fresh frozen, or canned — or the weight of package — that gives the most servings for the money To make an intelligent choice among brands of the same product, test different ones to see which one gives the greatest quality and number of servings for the money.

—Using grades in making your food purchases. Government grades will enable you to be sure of the quality of the food you buy, and you are then better able to compare prices asked.

—Taking advantage of seasonal abundances. Advertisements will keep you informed of these foods, which will often be offered at lower prices at their peak of quality.

—Limiting perishable food purchases to amounts that can be used while they are in top quality.

—Preventing food waste by proper storage and by cooking methods that conserve nutrients.

—Increasing skills in cookery.

—Considering family likes and dislikes when food shopping. Thrifty food buys pay off only if your family eats and enjoys the food.

* * * *

Here are some suggestions that may help you get more food value for your dollars

—When buying meat, consider the amount of lean meat in the cut, not the cost per pound, Some cuts contain bone, gristle, and fat waste For example, ground beef and beef short ribs may cost the same per pound but ground beef will give twice as many servings or more per pound as short ribs. Bacon, which is largely fat, is one of the most expensive foods you can buy in terms of protein value.

—Chicken and turkey have a large proportion of bone to lean, but are often bargains compared with other meats Fish is high in nutrients; often low in cost.

—Eggs are usually a less expensive source of nutrients than most meats. Dry beans and peanut butter are inexpensive alternates for meat.

—Beef, lamb, and pork liver give unusually high nutritive returns for money spent

—Study bread labels before you buy. Choose bread for weght and food value, not by the size of the loaf. Look for bread that is whole-grain or enriched, and that contains milk.

—Buy packaged cereals or any other packaged food by weight, not by the size of the package. To compare prices, first look for the weights listed on the labels and note the prices. Then figure the costs for an ounce or a pound

—Ready-to-serve cereals in multipacks of small boxes may cost two or three times more per ounce than the same cereal in a larger box Sugar-coated, ready-to-serve cereals cost more, per ounce, than many common, unsweetened ones, and furnish more calories, but less other food value

—Cereals you cook yourself (particularly the kinds that take longer to cook) are nearly always less expensive than the ready-prepared ones.

—Baked goods made at home usually cost less than ready-baked ones.

—Nonfat dry milk and evaporated milk cost considerably less per quart when reconstituted than whole fluid milk, and supply comparable amounts of calcium and protein. Reconstituted nonfat dry milk is an excellent beverage for most persons and generally can be substituted for whole fluid milk in cooking. For baking and preparing many other foods, nonfat dry milk does not need to be resonstituted before using A glass of whole fluid milk usually costs three times as much as a glass of reconstituted nonfat dry milk.

—Choose the type of pack or grade in a canned product that is appropriate to your cooking method. It is thrifty to buy canned tomatoes of low market grade for stews and sauces. A can of solid white meat tuna costs more than the same size can of grated light meat tuna You may prefer the solid pack for a salad and the grated pack for casseroles and sandwich fillings.

—Consider your time and the quality of the finished product in deciding between convenience foods (those with more than usual services add-

(Continued from Page 8)

d) and unserviced ones. Compare prices to see if it pays to prepare a product yourself from basic ingredients. Sometimes it does not. How much you enjoy cooking and how much time you can spend will influence your choice

* * * *

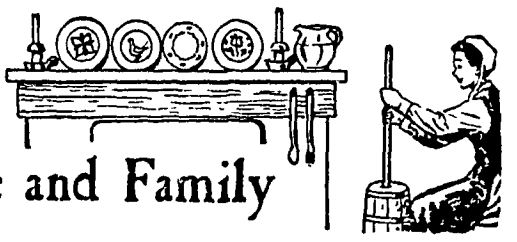
An unusual main dish that fits into an economical food budget is Hot Chicken Salad. Using economical chicken, the "salad" has welcome novelty when you plan a company menu. Bake it in one big casserole or in individual casseroles; serve with a vegetable, tossed salad, hot rolls and a favorite dessert.

HOT CHICKEN SALAD

1½	cups ready-to-eat high protein cereal
3	cups diced, cooked chicken
1	cup finely cut celery
¼	cup chopped, pitted ripe olives
3	tablespoons cut pimiento
3	tablespoons finely chopped green onions
½	teaspoon salt
1	cup cooked salad dressing
1	tablespoon butter or margarine

Crush cereal into coarse crumbs. Combine all ingredients except cereal and butter. Divide chicken salad into 6 greased individual casseroles or put in one big casserole. Combine cereal crumbs with melted butter and sprinkle over chicken salad. Bake in moderately hot oven (400 degrees) about 15 minutes or until thoroughly heated.

* * * *



For the Farm Wife and Family

Ladies, Have You Heard? . . .

By: Jane Thurston, Extension Home Economist

THURSTON

Worth Trying Anytime

Add glamor and flavor to casseroles with colorful ripe olives Chop or slice ripe olives and stir into macaroni and cheese or your favorite tuna-noodle dish

For a different appearance and a new flavor to mashed sweet potatoes balls stick toasted slivered almonds into the balls Put into a 350-degree oven and heat about 25 minutes

A surefire eye-opener for breakfast is to heat canned peach halves in their syrup, then drain and fill the peach cups with hot crumbled bacon Serve at once with French toast or waffles

Instead of using milk when you scramble eggs, use two tablespoons of cottage cheese for each egg Beat eggs with cheese and salt. Cook in butter, stirring occasionally until eggs are of desired firmness. Don t overcook.

About Buying And Storing Potatoes

Fall crop potatoes are a good buy. Start with high-quality potatoes, store them properly and they'll keep well for several months.

When shopping, look for potatoes that are firm, smooth, well-shaped, free from cuts and decay It's hard to judge the quality of potatoes covered with soil so look for reasonably clean ones Avoid potatoes that show green color on some part of the surface . . the green portions taste bitter.

There's less waste in paring if you select potatoes that are regular in shape and have shallow eyes

As for storing, keep potatoes in a cool, dark place with some air circulating around them It temperature is below 45 degrees, potatoes may become too sweet But they may sprout and shrivel if stored in a place that's too warm, that is above 60 or 65 degrees

Buy only the quantity of potatoes you can store properly and use within a reasonable

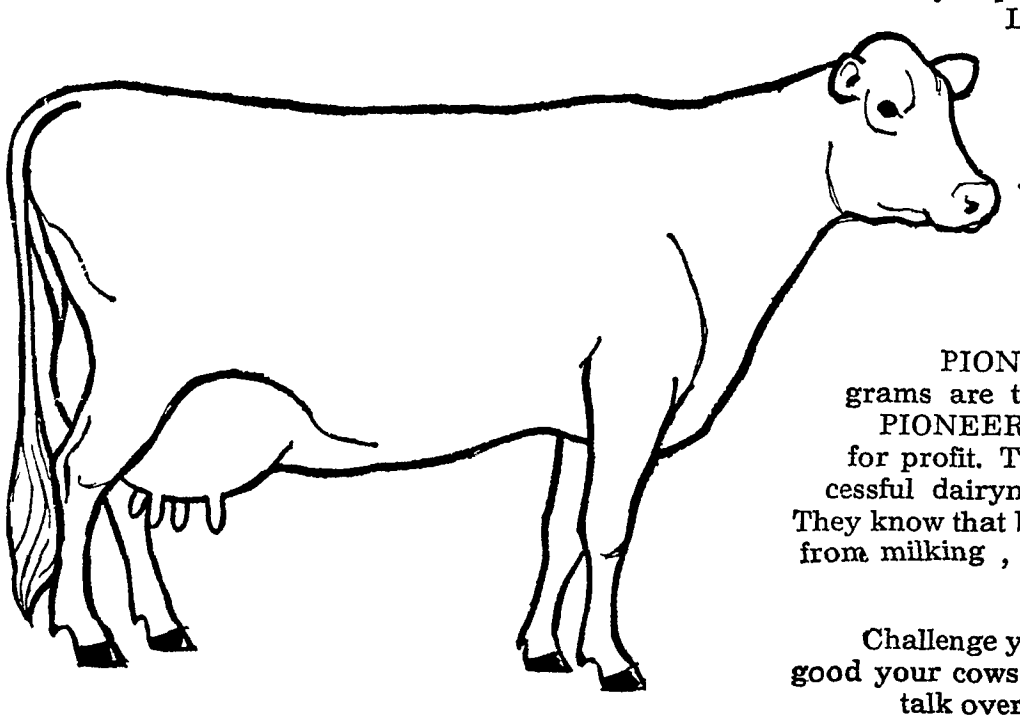
FACTORY WITHOUT MATERIALS?

You've been breeding for high production. Through selection and culling you've improved the bred-in milk-producing capability of your herd tremendously. Now you have cows with a profit-making capacity to produce. Yet returns may still be disappointingly small.

Each of your cows may be like a manufacturing plant equipped with the best facilities but lacking sufficient raw materials. In those circumstances, top-level production is impossible.



If your cows are only partly nourished, they can do only a part-way production job. Lacking needed amounts of milk-making nutrients, they just can't produce to the limit of their bred-in potential . . . can't produce those extra tons of milk that mean really satisfactory profits.

PIONEER dairy feeding programs are the answer. Feeding the PIONEER way means managing for profit. That's why so many successful dairymen rely on PIONEER. They know that bigger milk profits come from milking, better-producing cows.

Challenge your herd! Find out how good your cows really are. Stop in and talk over your operation with us soon. Remember . . . there's a PIONEER dairy feeding program to fit your needs.

PIONEER®

ngth of time.

Choosing A Hairbrush

A brush with short, stiff ristles is best for stimulating he scalp, but a brush with soft rustles is good for polishing ighlights into your hair.

A brush should have good bend recovery" Before buying a brush, press hard on the ristles to see whether they pring back quickly. Bristles hat don't have this kind of pring will soon become matted nd useless.

Apply light pressure with he palm of your hand to check he bristle ends. If they feel oo prickly, it means the brush an break delicate or colorreated hair and may injure a ender scalp.

Some brushes have both natural and nylon bristles for urability and gentle brushing ower. Natural bristles absorb soil and hair oils readily and can be damaged by hair oils. In general, nylon bristles can take more hard use and are easily cleaned.

Once you find the right brush, get two, so there's always a clean one handy.

Farm Women 3 Vote Donations

Mrs. Frank Snyder and her daughter Miss Nancy Snyder were hostesses to Farm Women Society 3 last Saturday afternoon in their home in Akron.

The scripture lesson was read by Miss Snyder and followed by a memorial service, conducted by Mrs. Gilbert Paul, in memory of Mrs. David Zartman who passed away after being injured in an automobile accident near Dillon, S. C., while she and her husband were enroute to their winter home in Florida.

"Calendar Through The Year in Gift Wrapping" was the theme of a demonstration and talk given by Mrs. Martin Swarr, Landisville. She demonstrated how materials can be used to design lovely gift wrappings and showed finished packages with designs for each month

Members voted donations of $50 to Ephrata Recreation Center, and $15 to Heart Haven. It was reported that 116 cancer pads and one "Johnny coat" were delivered to the Cancer Society.

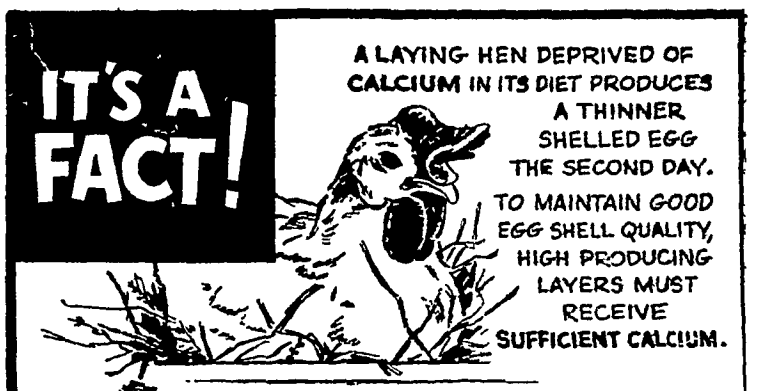
The group will entertain their husbands at a hockey game at Hershey on February 29.

On March 20 at 7:30 p m the group will have a "Bonny Hop" in the Mt. Airy fire hall.

Protect House Plants

Keep hous plants away from radiators, but guard against freezing during cold nights especially where such plants are placed close to windows.

Extension circular 491, "Growing Better House Plants," has useful tips on growing plants in the home It's available from county agricultural agents



IT'S A FACT!
A LAYING HEN DEPRIVED OF CALCIUM IN ITS DIET PRODUCES A THINNER SHELLED EGG THE SECOND DAY.
TO MAINTAIN GOOD EGG SHELL QUALITY, HIGH PRODUCING LAYERS MUST RECEIVE SUFFICIENT CALCIUM.

RED ROSE LAYING FEEDS AND LAYING FEED SUPPLEMENTS PROVIDE A DEPENDABLE SOURCE OF CALCIUM, WITH ADDITIONAL MANGANESE AND ZINC FOR CONSISTENT STRONG EGG SHELL FORMATION.

● Soils Day

(Continued from Page 1)

field crops and miscellaneous cash crops at the Pennsylvania State Experimental Research Farm near Landisville

This is an educational type all-day meeting sponsored by the Lancaster County Extension Service It will begin at 9:30 a.m and conclude by 3 00 p m A noon lunch will be available at the Pavilion.

Opportunity will be given to see exhibits and displays of firms engaged in supplying farmers with lime, fertilizers, seed and other supplies.

Elmer Pifer, extension agronomist will discuss new small grain varieties; Henry Engle, research agronomist from the U. S. Department of Agriculture, will talk about chemicals for tobacco sucker control, and John Yocum, director of the Southeastern Pennsylvania Field Research Laboratory, will discuss miscellaneous cash crops for Lancaster County. Clarence Bryner, extension agronomist, will bring the latest developments in efficient corn production

After the noon recess, Lueck will present the county hay and corn awards, and George Berggren, extension agronomist will discuss weed control

PROFIT WITH

Feeders everywhere are talking about Ful-O-Pep Cattle-izer Beef Supplement

In feedlot after feedlot—commercial and farm—feeders are reporting better gains and conversions at lower feed cost.

The reason: It's Ful-O-Pep Cattle-izer Beef Supplement . . . designed to enable the beef animal to get up to 20% more energy from the same amount of feed . . . and to use that extra energy for faster, more efficient gains.

Gain, efficiency of gain, cost of gain, market value of cattle, and other factors are reflected in net return. And *net return,* cattlemen are reporting, is higher when Ful-O-Pep Cattle-izer Beef Supplement is fed.

Stop in and talk it over

U.S. Signs Meat Import Restriction Pact With Australia, New Zealand

The Governments of Australia and New Zealand have agreed to limit meat exports to the United States the Departments of State and Agriculture announced today.

Australia and New Zealand are the principal suppliers to the United States of beef and veal The agreements announced today were concluded because United States imports of these products have increased markedly the past few years Beef cattle prices are low and declined importantly in 1963 Low domestic prices were mostly caused by heavy domestic production of fed beef However analyses by the United States Department of Agriculture show that imports also were a contributing factor

Secretary of Agriculture Orville L Freeman issued the following statement on the signing of Agreements between the United States and Australia and New Zealand to limit exports of beef veal and mutton to the U S market

I am pleased that these agreements have been concluded with our major suppliers Livestock producers in the United States are now assured that imports of beef, veal and mutton this year will be limited to approximately the 1962-63 average level, about 6 percent below the record level of 1963

Future expansion of beef imports will be far below recent levels This is the most important result of the Agreements Australia's shipments increased by 89 percent in 1962 and in 1963 were 17 percent above 1962 Without these Agreements, beef and veal imports this year were expected to increase by 8 to 10 percent Instead they will decline by about 6 percent in 1964 and will increase by less than 4 percent per year in 1965 and 1966.

Beef and veal imports cannot be substantially upgraded by a further shift to primal cuts under the Agreements It is understood that further shipments will be of approximately the same composition as recent shipments

Other important provisions include

At least 180 days notice if either Government wants to terminate the Agreement.

Renegotiation of the rate of increase in shipments in 1966.

Assurance of continued efforts by both Governments to improve access to world beef markets in the Kennedy Round of trade negotiations.

U. S. Imports from Australia and New Zealand
(Millions of pounds, product weight)

Year	Australia		New Zealand
	Beef and veal	Beef, veal and mutton	Beef and veal
1958	18	32	184
1959	224	262	162
1960	145	177	131
1961	234	274	154
1962	442	505	214
Estimates, subject to revision			
1963	517	577	244
As specified in the Agreement			
1964		542	231
1965		562	240
1966		582	249

Report Shows Family Farms Are Bigger

Even though farms are getting bigger, most of them continue to be family businesses in which operators and family members are risk-taking managers doing most of the farm work, according to a report published today by the U. S. Department of Agriculture.

The report, by USDA's Economic Research Service, shows that more and more of total sales of farm products come from farms doing $40,000 or more annual business Farms with sales between $40,000 and $100,000 more than tripled in number from 1939 to 1959 Their output per farm increased only 8 percent. Farms with marketing of $100,000 or more in annual sales increased from 5,000 to 20,000 from 1939 to 1959, and their output per farm rose 10 percent.

Average sales volume for the 20,000 biggest farms, with marketings of $100,000 or more each year, was $250,000 — but only 2 percent of these hit the million dollar mark

Forty percent of the farms with sales of $40,000 or more were family farms in 1959 In the Corn Belt and Northern Plains family farms accounted for three-fifths of the sales from these farms and one-fifth of the sales of farms with marketings of $100,00 or more

For all farms, 70 percent of marketings came from family farms.

Technological advances in agriculture have not materially affected the traditional pattern of family farms as the dominant unit of American agriculture Hired managers are mostly on farms with marketings of $100,000 or more, but only 13 percent of these had hired managers in 1959, the report states.

Crops For Rotational Pasture

John E Baylor, extension agronomist at The Pennsylvania State University, says sudangrass and sudan-sorghum hybrids are the best summer seeded annual crops for rotational pasture and green feeding in many areas of Pennsylvania

Tips For Vegetable Growers

New seed catalogs make good winter reading for gardeners, suggests J O. Dutt, extension vegetable specialist at The Pennsylvania State University, who reminds growers to place seed orders while there's still plenty of time to get the "varieties you want."

D. H. I. A. Records Prove — It Pays to Feed Hornco

"Our Herd Really Came To Life On The UNI-PEL PROGRAM"

Says: Melvin J. Starner, R. D. #2, New Oxford, Pa.

"We started feeding Hornco Uni-pel dairy pellets during the 1962 testing year. The record below shows the improvement in 1963."

	1962	1963	Improvement
Cows milked	54	53	-1
Pound of fat	411	513	+102
Pounds of milk	10958	13626	+2668
% Fat	3.8	3.8	-
% of cows settling on 1st service	72%	77%	+5%

Sam and Eugene Starner are seen going over dairy records with D. H. Vanpelt - Hornco Dairy Specialist.

HORNCO FEEDS

"Service makes the difference when you buy from the Hornco man with the Hornco plan"
